

ULTRA HIGH-PRESSURE WATER JETS & WET ABRASIVE BLAST SURFACE TREATMENT

Hyperblast uses ultra-high-pressure water jets that shoot up to 43,500 PSI/3000 BAR continuously for hours and days on. From blasting only projects to turn-key contracts including surface preparation and coating applications, our team is ready for.

OUR SERVICES

-  Shipyards and Drydocks
-  Water Treatment Facilities
-  Vessel Cargo Hold Blasting along with Hull Blasting
-  Construction Industry and Chemical Refineries
-  Rental Agreements by hour for your special cases

OUR EQUIPMENTS

- **5 units 35L/ per min 2500 bar dual outlet Water Jets**
- **2 units 65 L/per min 3000 bar four outlet Water Jets**
- **12 water guns with various types of 3D nozzles for any job**
- **2 open-type magnetic crawling robots and 1 vacuum magnetic crawling robot**
- **2 handheld manipulator with optional Vacuum Unit (ETRC)**
- **3 units 500 bar HP Water Jets**
- **Dry-ice blasting and production machine**
- **9 pcs PH200 pressurized paint pumps**
- **15 m Scissor Manlift, 20 m Crawler Telescopic Manlift**
- **8 nozzles dry sand blasting**
- **Cherry pickers, reaching platforms**
- **Polyurethane foam sprayer for isolation applications**

Water jet blasting projects are highly dependent on *pre-planning* and organisation with the facilities or shipyards.

With the correct inspection of the site, we can ensure a smooth docking of your vessel or perhaps a minimal downtime of your facility.

With a team of 16 people with many years of water blasting experience, we are able to work day and night shifts 24 hours a day.

We can blast **cargo holds up to SA2.0** standard at berth and depending on surface conditions we can achieve a blasting capacity of up to 1500 m² per day. If you do not have a fixed berth we can also offer a full package including berthing.

The standards we follow are up to date with ISO8504-1:2020.

We also use NACE and SSPC (AMPP) to ensure we are up to date with the latest definitions and protocols.
